Degree of spondylolisthesis is far from normal in the abnormal group
Line = quantiles of a normal distribution with the same mean and SD; heavy right tail with one extreme patient (418 mm)
Abnormal (n = 210): Shapiro-Wilk W = 0.724, p < 0.001
Normal (n = 100): Shapiro-Wilk W = 0.884, p < 0.001
Sample quantiles (degree of spondylolisthesis, mm)
Theoretical quantiles (standard normal)
