

Basal-like and luminal A tumours differ in thousands of transcripts

Welch t-test per probe (41 basal-like vs 29 luminal A samples); dashed lines: $|\log_2FC| = 1$ and $FDR = 0.05$ (Benjamini-Hochberg)

54,675 probes tested; labelled genes are the 12 most significant in each direction. Gene symbols from the NCBI GEO GPL570 annotation.
